MARKET ENTRY BRIEFING

Roller bearings in South Africa

Three decisions that decide whether South Africa pays back for a foreign bearing manufacturer

Prepared for	Specimen for a hypothetical foreign roller-bearing manufacturer with no South African presence. Not a client document.
Prepared by	Principal & Founder, Roadfly Corp
Date	12 October 2026
Basis	Stage 1 desk intelligence, every finding evidence-rated. Trade data: UN Comtrade, HS 8482, 2020 to 2025, US dollars.

Roadfly Corp is paid by its clients alone. We take no commission on sales and no fees from distributors.

Three things you should know

1. A US$227 million import market that is flat in dollars and moving to China. Imports reached US$227.0m in 2025 against US$206.6m in 2021, about 2.4% a year. China's share rose from 25.0% in 2023 to 33.7% in 2025, the largest shift of any origin. **[VERIFIED: UN Comtrade, HS 8482]**

2. Prices sit in two tiers, with a thin middle. For spherical roller bearings, the mining and conveyor workhorse, China averaged US$49 a unit in 2025, Japan US$77, Germany US$145 and Sweden US$401. No origin with more than 2% of value prices between US$77 and US$145. **[INDICATED: unit values average all sizes]**

3. The partner, not the product, decides access. Buyers reach brands through national networks: one distributor group runs 82 branches in 15 countries; the market leader serves through 40+ local distributors. A new brand becomes someone's fourth line unless the partner choice is deliberate. **[VERIFIED: company publications]**

[VERIFIED] *primary source or direct confirmation.* ***[INDICATED]*** *credible secondary source, or a figure needing care.* ***[HYPOTHESIS]*** *our inference, tested in Stage 2.*

1 The market: steady demand, a shifting supply base

South Africa imports most of the bearings its mines, plants and vehicles consume. Spend has held at US$206m to US$227m a year since 2021 while the origin mix moved towards China.

Bearing type	HS	2021, US$m	2025, US$m	Largest origin, 2025
Ball bearings	8482.10	72.9	78.7	China, 41.6% (US$1.24 a unit)
Tapered roller	8482.20	58.6	66.3	China, 35.1%; USA 16.5%
Spherical roller	8482.30	25.7	26.6	China, 32.0%; Germany 18.0%
Cylindrical roller	8482.50	20.3	24.3	Germany, 21.7%; China 17.5%
Needle, other, balls and parts	8482.40–99	29.1	31.1	Mixed
Total	8482	**206.6**	**227.0**	China 33.7%, USA 12.6%, Germany 10.4%, Japan 10.0%

Source: UN Comtrade public API, South Africa imports by partner, retrieved 12 October 2026. EU-27 origins together supplied 27.7% (US$62.9m) in 2025, down from 29.9% in 2024. ***[VERIFIED]***

Roadfly Corp is a trading name of The Toasted Group of Companies (Pty) Ltd · Registration no. 2026/110642/07 · Republic of South Africa

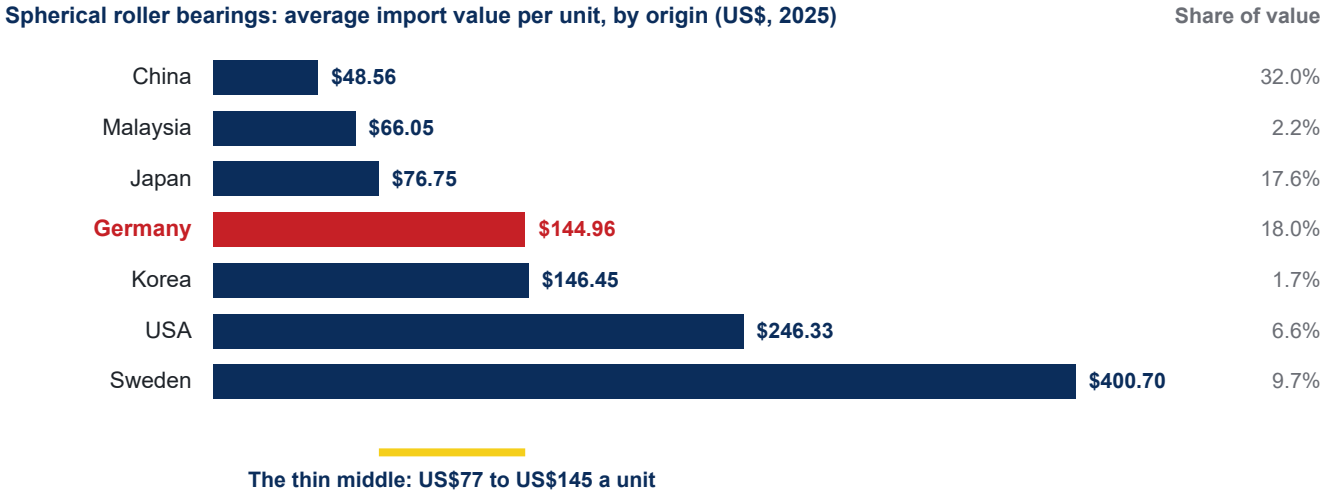

Figure 1. HS 8482.30 imports into South Africa, 2025: 328,831 units, US$26.6m. Unit values average all sizes and are indicative only; Romania (215 very large units at US$5,441) is excluded as an outlier. Germany is highlighted as a reference European origin. Source: UN Comtrade.

Position, not price, is the entry point. Competing with Chinese unit values means competing on the buyer's purchase price alone. The European premium is held by brands with local stock, engineers and remanufacturing. A manufacturer with a credible quality story and a price between those tiers has room, if it can prove life-cycle cost on a like-for-like basket. **[HYPOTHESIS]**

The tariff is not the barrier. South Africa's applied MFN duty is 0% on ball, spherical, cylindrical and needle bearings. Tapered roller bearings and parts carry duty only on a few lines, at up to 20%, historically for railway journal bearings. VAT of 15% applies at import. **[INDICATED: WITS-TRAINS, SA tariff data 2023; SARS notice R160, 2003]**

Demand is under pressure in mining, recovering in manufacturing. Mining production fell 4.0% year on year in June 2026 and 7.5% in July. The Absa manufacturing PMI returned to 50.7 in September 2026, its first reading above 50 since May. Replacement demand follows running hours, so the slowdown favours suppliers who reduce downtime, not those who simply cost less. **[VERIFIED: Stats SA P2041; Absa PMI]** **[HYPOTHESIS: implication]**

South Africa is also the gateway to the region. It exported US$49.0m of bearings in 2025, 80% of it to SADC countries, led by Zambia (US$9.1m), Namibia (US$7.3m), Zimbabwe, Botswana and Mozambique. A well-chosen South African partner can carry a brand into the Copperbelt. **[VERIFIED: UN Comtrade, HS 8482 exports]**

2 The channel: what a buyer finds today

A maintenance buyer buys bearings from a local branch, not from a manufacturer abroad. The channel is concentrated, brand-led and already full.

Where a buyer looks	What they find	What it means for a new brand
Manufacturer-owned operations	SKF South Africa holds central stock in Johannesburg, serves through more than 40 authorised distributors and runs a remanufacturing centre. **[VERIFIED: Engineering News]**	The premium leader competes on service and uptime, not price. Matching it brand for brand is expensive.
National distributor groups	BMG (Invicta Holdings): 82 branches, 15 countries, 70,000 customers. Bearings International (Hudaco Group): 46+ branches in South Africa and Namibia, sole distributor for many brands. **[VERIFIED: BMG overview 2024/25]** **[INDICATED: exhibitor profile]**	Reach is excellent, attention is not. A new line competes with brands these groups already hold exclusively.

Roadfly Corp is a trading name of The Toasted Group of Companies (Pty) Ltd · Registration no. 2026/110642/07 · Republic of South Africa

Where a buyer looks	What they find	What it means for a new brand
Brand-authorised independents	Specialist distributors authorised by one or two global brands, typically 5 to 10 branches. **[INDICATED: trade press, c. 2017]**	Often the best-motivated partner for a challenger brand, if their brand agreements allow it.
Grey market and counterfeits	Police raids seized about R5m of counterfeit bearings in Johannesburg (2022, 98% industrial types) and counterfeit stock from a Cape Town seller (January 2024). **[VERIFIED: NSK; Engineering News]**	Buyers are wary of unfamiliar brands. Traceability and an authorised-partner list are selling points.

Public-source audit, October 2026. Branch counts and brand agreements change; Stage 2 confirms each by direct call.

A market risk that a new brand can turn into an asset

Counterfeits push maintenance managers to brands they know. A newcomer that publishes its authorised partners and marks every bearing for verification answers the buyer's real fear: an unplanned stop. **[HYPOTHESIS]**

3 Where a challenger brand fits first

Segment	Why it suits a challenger	What stands in the way	Time to revenue
Bulk handling and conveyors (iron ore, coal, ports)	Heavy spherical and split-bearing use; downtime is costly, so life-cycle arguments land. **[INDICATED: SKF case, Northern Cape, Oct 2026]**	Incumbent service contracts; trial installations needed	6 to 12 months
Aggregates, cement and quarries	Price-sensitive, shorter approval chains, fewer central contracts. **[HYPOTHESIS]**	Lower margins; payment terms	3 to 6 months
Regional re-export (Zambia, Namibia, DRC)	80% of SA bearing exports go to SADC. **[VERIFIED: UN Comtrade]**	Needs a partner with cross-border branches	6 to 12 months
Large mining houses, central procurement	Largest volumes and longest contracts. **[INDICATED]**	Vendor approval, technical trials, partner B-BBEE level	12 to 24 months

The partner gate

In September 2021 the High Court set aside the 2018 Mining Charter's procurement targets (70% of mining goods from South African suppliers); the department did not appeal. Duties can still sit in mining-right conditions, and a draft Mineral Resources Development Bill (May 2025) would restore them in law. **[VERIFIED: Fasken; Minerals Council; draft Bill]** Buyers also score their own B-BBEE procurement on local spend, so the distributor's level travels with every order. **[INDICATED: B-BBEE Codes]**

4 What is changing, and why timing matters

Development	Status, October 2026	What it means for a new brand
China's share of imports	25.0% (2023) to 33.7% (2025)	Buyers are already switching origins on price; the question is whether quality brands can hold the middle. **[VERIFIED]**
Durban port performance	Average port calls above 12 days by late August 2026 after a terminal system change (Safla)	Local stock depth becomes a selling point; plan inventory, not just price. **[VERIFIED]**
Mining output	Down 4.0% (June) and 7.5% (July) year on year	Buyers cut spares budgets, but pay for uptime. Lead with failure cost. **[VERIFIED]** **[HYPOTHESIS]**

Roadfly Corp is a trading name of The Toasted Group of Companies (Pty) Ltd · Registration no. 2026/110642/07 · Republic of South Africa

Development	Status, October 2026	What it means for a new brand
Mining law reform	Draft Bill published May 2025; parliamentary status unconfirmed	Partner ownership may matter more at the next contract cycle. [INDICATED]

5 Three decisions, and how we settle them

Decision	The question	Evidence Stage 2 gathers
1. Partner model	National group, brand-authorised independent, or a mining-service company?	Interviews with 5 distributors on brand exclusivity, stock policy and B-BBEE level; buyer view of each.
2. Segment first	Conveyors and bulk handling, or quarries and cement?	30 to 50 rated field observations at plants, stores and branches; installed-base and failure patterns.
3. Price position	Can the brand hold US$77 to US$145 a unit for spherical bearings?	Like-for-like basket pricing on 20 part numbers; landed cost and margin stack in rand and US dollars.

Specimen recommendation: investigate further. Finding: the channel is concentrated and the premium is held by incumbents with local service. **Implication:** joining a national group as another line offers little reason for its branches to sell the brand. **Decision:** test conveyors and bulk handling through one motivated partner at a defined price position before signing any national agreement. [HYPOTHESIS]

Engagement options

Option	What it settles	Timing	Fixed fee
Stage 2. Channel Verification	Who sells the category, trademark check, five distributor or buyer conversations.	2 weeks	US$5,600
Stage 2. Market Reality Check Recommended here	12 interviews, 30 to 50 field observations, basket pricing and margin stack, go/no-go, 90-day plan.	4–6 weeks	US$17,600
Stage 3. Reality Check + Distributor Intelligence	Everything above, plus 15 to 25 distributors vetted to a shortlist of 5 to 8.	8–10 weeks	US$27,900

The Stage 1 briefing fee is credited in full against a Stage 2 engagement confirmed within 30 days. Fees are payable 50% on commencement and 50% on delivery, in US dollars or euros.

Next step

Your briefing is built for your product, HS codes and decision: 7 business days, fixed US$2,000. Start with the free 2-minute Market Fit Check at roadflycorp.com.
